PRODUCT

Care and Maintenance

ezfurn
furniture made easy.

WARRANTY:

In order to ensure the longevity of a product it must be cared for and maintained properly. Different materials need different care methods and steps must be followed in order for the product to be kept in the same condition it was purchased and for the warranty to remain valid.

Our products either carry a 12 month (Asian products) or a 24 month warranty (European products) unless otherwise specified. Should the products prove to be defective within this period, and provided that the damage is not due to the use or misuse of the products or from fair wear and tear, ezfurn will at its discretion, replace or repair defective products free of charge.

MAINTENANCE:

Chair Glides

Chair glides should be checked every 3-6 months, these are a wearable item that should be replaced when worn down to protect furniture and flooring from damage.

Table Glides

Table glides should be tightened everyday to prevent unstable tables and loss of glides.

Table & Chair Screws

When building ezfurn products it is recommended to use thread lock on the full length of all screws to secure them in place. However, it is good practice to check and tighten all screws on tables, chairs & stools (especially on seat pads) every 6 months to ensure the safety of its users and eliminate potential damage to the products.

Moving Furniture

When moving furniture never drag chairs or tables accross the floor. To move tables do not lift by the top, it is recommended that you tilt it on a 45 degree angle, bend your knees and place a hand on the column and the other near the base, then lift with your legs.

Stacking Seating

Not all seating is made for stacking so always check first. You can check ezfurn product techsheet to find out. Never stack seating on tables, do not stack seating too high and do not drag stacked seating accross the floor.

Timber

Each piece of timber is unique and it is not uncommon to find several contrasts in the same piece of furniture. Knots and other charateristics are an indication of genuine quality.

METAL

Metal Ranges

MILD STEEL (Monthly):

1. Regularly dust surface with damp cloth.
2. Wash with a soft cloth and warm soapy water.
3. Always dry with a lint free cloth.

DO NOT: Use abrasive pads, brushes, or cleaners like steel wool, as it will scratch the surface.
